1
1.

(Three Times Amended) A device for producing granules comprising a drum with peripheral apertures, a member for feeding said drum with coating or fixing substance, and a member for supplying gas, wherein said drum comprises mutually parallel sections that define, between them, said apertures that form a path for a gas flow between the inside and the outside of said drum.

24.

(Amended) The device according to claim 1, wherein said mutually parallel sections form a surface of said drum supporting the granules.
